## Linear algebra 2: exercises for Section 8 (part 2)

Ex. 8.8. Let $V$ be the 3 -dimensional vector space of polynomials of degree at most 2 with coefficients in $\mathbb{R}$. For $f, g \in V$ define the bilinear form $\phi: V \times V \rightarrow \mathbb{R}$ by

$$
\phi(f, g)=\int_{-1}^{1} x f(x) g(x) d x
$$

1. Is $\phi$ non-degenerate or degenerate?
2. Give a basis of $V$ for which the matrix associated to $\phi$ is diagonal.
3. Show that $V$ has a 2-dimensional subspace $U$ for which $U \subset U^{\perp}$.

Ex. 8.9. Let $e_{1}, \ldots, e_{n}$ be the standard basis of $V=\mathbb{R}^{n}$, and define a symmetric bilinear form $\phi$ on $V$ by $\phi\left(e_{i}, e_{j}\right)=2$ for all $i, j \in\{1, \ldots, n\}$. Give the signature of $\phi$ and a diagonalizing basis for $\phi$.

Ex. 8.10. Suppose $V$ is a vector space over $\mathbb{R}$ of finite dimension $n$ with a non-degenerate bilinear form $\phi: V \times V \rightarrow \mathbb{R}$, and suppose that $U$ is a subspace of $V$ with $U \subset U^{\perp}$. Then show that the dimension of $U$ is at most $n / 2$.

Ex. 8.11. For $x \in \mathbb{R}$ consider the matrix

$$
A_{x}=\left(\begin{array}{rr}
x & -1 \\
-1 & x
\end{array}\right)
$$

1. What is the signature of $A_{1}$ and $A_{-1}$ ?
2. For which $x$ is $A_{x}$ positive definite?
3. For which $x$ is $\left(\begin{array}{rrr}x & -1 & 1 \\ -1 & x & 1 \\ 1 & 1 & 1\end{array}\right)$ positive definite?

Ex. 8.12. Let $V$ be a vector space over $\mathbb{R}$, let $b: V \times V \rightarrow \mathbb{R}$ be an skew-symmetric bilinear form, and let $x \in V$ be an element that is not in the left kernel of $b$.

1. Show that there exist $y \in V$ such that $b(x, y)=1$ and a linear subspace $U \subset V$ such that $V=\langle x, y\rangle \oplus U$ is an orthogonal direct sum with respect to $b$.
Hint. Take $U=\langle x, y\rangle^{\perp}=\{v \in V: b(x, v)=b(y, v)=0\}$.
2. Conclude that if $\operatorname{dim} V<\infty$, then then there exists a basis of $V$ such that the matrix representing $b$ with respect to this basis is a block diagonal matrix with blocks $B_{1}, \ldots, B_{l}$ of the form

$$
\left(\begin{array}{cc}
0 & 1 \\
-1 & 0
\end{array}\right)
$$

and zero blocks $B_{l+1}, \ldots, B_{k}$.
