#### Introduction

Shifts	with	$\mid$ without $\mid$	Total
	incident	incident	
with Lucia	9	133	142
without L.	0	887	887
Total	9	1020	1029

- The case of Lucia de Berk
  - Lucia's vital statistics
- Forensic statistics, learning

#### Lucia: my connection

- 2001: Witch-hunt
- 2002: Witch-trial by statistics
- 2004: Re-trial, "medical proof only"
- 2006: Ton Derksen & Metta de Noo's book
- 2006: Study verdict, join fight
- 2010: Lucia is innocent, but who did it?

#### Lucia: my motives

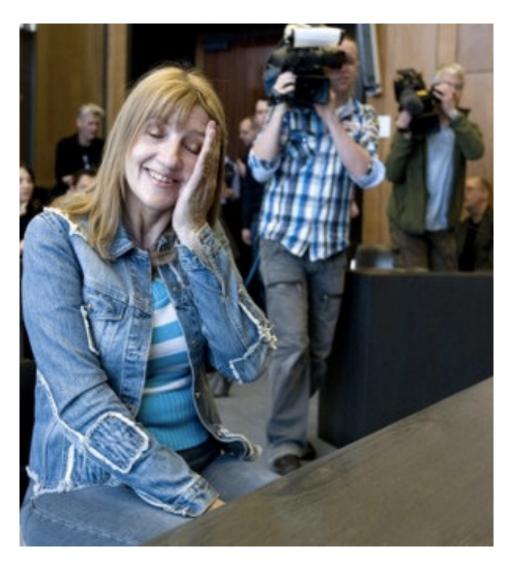

- Shame
- Anger
- Passion (for statistics, science)

#### Dramatis Personae

#### Dramatis Personae

#### Dramatis Personae

17 judges: Fokkens, Fokkema, Fokking...

JKZ director Smits
The Derksen family
An army of medical experts

• • •

un film di giuseppe tornatore

17 judges: Fokker JKZ director Smit The Derksen fami An army of medic SCONOSCI

#### 2001: JKZ, the Hague

- 4 Sept, early morning: baby Amber unexpectedly dies; natural death registered
- Later that day: a nurse goes to *chef de clinique* with "bad feeling": *Lucia was on duty again* ...
- C-C does Excel spreadsheet statistics: <u>no coincidence</u>
- ... goes to director Smits
- 5 Sept: Amber's death is now <u>unnatural</u>
- 5–17 Sept: 30+ incidents & deaths at JKZ and RKZ attributed to Lucia; gossip; ...
- 17 Sept: press conference; newspaper report; 5 deaths and 5 suspicious incidents reported to police

### 2003: the Hague Lower court

- Lucia pleads innocent
- and gets life sentence for 4 murders + 2 attempts at JKZ, RKZ, Leienburg
- Statistics essential: "1 in 342 million"
- No medical proof. Only statement of co-detainee
- Both defence and prosecution appeal

Elffers: "Your honour, it was <u>not</u> chance. The rest is up to you."

### 2004: the Hague Upper court

- Lucia gets life sentence +<u>TBR</u> for 7 murders + 3 attempts
- Medical proof that Amber died of digoxine; it was administered by Lucia (opportunity); motive: compulsion
- No statistics
- Chain argument
- Defence appeals (*novum* mislaid Strasbourg lab finding "no digoxine")

<u>TBR</u>= *ter beschikking rechter* = permanent detention in psychiatric care

### 2004: the Hague Upper court

- Lucia gets life sentence +<u>TBR</u> for 7 murders + 3 attempts
- Medical proof that Amber died of digoxine; it was administered by Lucia (opportunity); motive: compulsion
- No statistics
- Chain argument
- Defence appeals (*novum* mislaid Strasbourg lab finding "no digoxine")

<u>TBR</u>= *ter beschikking rechter* = permanent detention in psychiatric care

#### 2006: the Hague Supreme court

- Conviction is upheld except that <u>TBR</u> is ruled illegal (\*)
- Upper court (a new one) complies
- Lucia suffers a stroke

(\*) No relevant psychiatric disorder + non-guilty plee

#### Meanwhile ...

• <u>Medical doctor</u> Metta de Noo (*née* Derksen), sister-in-law of JKZ chief paediatrician Arda Derksen (*née* Lubsen)

ucia de

erechteliike

becomes uneasy

• The Derksen family is split; "committee Lucia de B." researches case

- Philosopher Ton Derksen publishes

  Lucia de B: reconstruction of a

  miscarriage of justice
  growing media interest
- Computer scientist/statistician Peter Grunwald reads it and makes me read it too

  growing media interest
- 2006: Derksen submits to CEAS:

  Committee for Evaluation of Closed Cases

#### 2007 Report of the CEAS

- Prosecution of case was tainted by tunnel-vision from very beginning
- "Experts" were chosen from small circle around JKZ, later advised police, later advised courts
- Experts disagree on cause of death of Amber
- Case should be reopened

#### The public debate

17 judges can't all be wrong!

• Slowly, the media change sides

Nature!

• Petition for reopening the case to minister; candle-light demonstration at prison; newspaper full page advert; ...

Nobel laureate!

• The legal establishment digs in its heels

• Politicians are silent

Undermining the foundations of the state!

- The medical establishment is silent
- Intellectuals, artists, scientists become involved
- Public opinion and academic opinion are won for Lucia
- Key figures in legal establishment are won for Lucia

#### 2008 The supreme court

- Advocate-General sees no *novum* in CEAS report
- <u>Despite this</u>, he commissions a multi-disciplinary medical investigation into case of Amber
- Lucia's sentence is temporarily suspended
- Investigation findings: Amber's death could well have been natural (exhaustion)
- A-G notes that Lucia did not lie about her doings

   and asks key trial expert if he agrees with new findings –
   Yes; he had been given incomplete information!
   A-G requests Supreme Court to reopen the case
- Supreme Court: that is indeed a novum

#### 2009: the last act

- Prosecution proposes major new *forensic-criminalistic* investigation (vs. defence's *theoretical-scientific*), on lines of "tender" by <u>Independent Forensic Services</u>
- ... but the court continues A-G's medical investigation into cases of Amber, Achraf, Achmad only

- Still never been heard:
  - a professional statistician
  - from medicine: the 2 qualified persons with overview of whole case (Arda Derksen, Metta de Noo)

#### 2010: the verdict

- Lucia is innocent
- All the deaths were "natural"
- Nurses' professional conduct was exemplary
- Usual medical errors in diagnosis, treatment, ...
- Minister of Justice and Chief Public Prosecutor and Head of Judiciary apologize

- Still never been heard:
  - a professional statistician
  - from medicine: the 2 qualified persons with overview of whole case (Arda Derksen, Metta de Noo)

#### 2010: the verdict

- Former director of JKZ: would do the same again today
- Chef-de-clinique at JKZ: would do the same again today
- Board of hospital: "we are a great hospital, and we always cooperated fully with justice department"
- 30% of Dutch population believes "she did it"

- Still never been heard:
  - a professional statistician
  - from medicine: the 2 qualified persons with overview of whole case (Arda Derksen, Metta de Noo)

#### Where was statistics?

- Statistics initiated the case
- Statistics central to 2003 conviction
- 2004: "no statistical probability calculation"; "all deaths and incidents shown by incontrovertible medical-scientific evidence to be unnatural"
- ... yet from publication of Derksen's book, statisticians at the heart of public movement to reopen case: why?

### The Statistics Lucia's working places

- Juliana Kinderziekenhuis (JKZ), mcu
- Rode Kruis Ziekenhuis (RKZ), icu-42
- Leijenburg Ziekenhuis
- Penintentiaire inrichting, Scheveningen

#### The Statisticians

For the police, and later for the lower and higher court:

- Henk Elffers (law psychologist)
- Richard de Mulder (*law and ict*)

For the defence (on appeal)

- Ronald Meester (*probability theory*)
- Michiel van Lambalgen (AI, logic)

#### Elffers' data

Shifts	with incident	without incident	Total
with Lucia	9	133	142
without L.	0	887	887
Total	9	1020	1029

Shifts	$\begin{array}{c} \text{with} \\ \text{incident} \end{array}$	without incident	Total	
with Lucia	6	52	58	
without L.	9	272	281	
Total	15	324	339	

JKZ (2nd year only)

RKZ-42

Shifts	$egin{array}{c}  ext{with} \  ext{incident} \end{array}$	without incident	Total
with Lucia	1	0	1
without L.	4	361	365
Total	5	361	366

RKZ-41

#### Elffers' 1 in 342 million

- Three Fisher exact tests
- JKZ: *post-hoc* correction by Bonferroni: 26 nurses
- Multiplication of three *p*-values
- Elffers emphasized that correlation ⇒ causation
- By way of example, perhaps:
  - Lucia is a bad nurse (but not a murderer)
  - Lucia has more difficult shifts
  - Lucia has more night shifts
  - Someone is trying to set Lucia up

#### de Mulder confirms

- Elffer's methodology is correct
- Even if the data is not completely correct, conclusions won't be changed
- It is certainly not a coincidence
- Lucia must explain why she was there

#### Statistics out, from 2004?

- The incidents at JKZ occurred in a short period in a ward where usually nothing happened
- Lucia was present every time
- A natural cause was ruled out, medically, in every case
- Lucia couldn't explain why she was repeatedly present

#### Statistics out, from 2004?

- The incidents at JKZ occurred in a short period in a ward where usually nothing happened?
- Lucia was present every time ?
- A natural cause was ruled out, medically, in every case ?
- Lucia couldn't explain why she was repeatedly present?

## The legal concept of irrefutable medical-scientific proof of unnatural death

- If the precise time of a death from complex causes can't be predicted, the (time of) death is *inexplicable*
- An *inexplicable* death is a *suspicious* death if Lucia is present, and hence perhaps *unnatural*
- For every case separately, a majority of medical experts thought the death was natural; but always one could be found who thought it unnatural
- In two cases, only one expert thought it was unusual; why? *Only* because Lucia was there!

### Elffers and de Mulder's expertise come in handy

- Chain proof: we have a lying murderess who was present at similar medically inexplicable events
- She must explain her presence (de Mulder), escape clauses (Elffers) are ruled out by herself

Judge: "Mrs de Berk: were you a bad nurse?"

Lucia: "No, your honour, my superiors and colleagues ..."

Judge: "Mrs de Berk: did you work more difficult shifts than your colleagues?"

Lucia: "No your honour, we shared all the work fairly ..."

#### More sharp legal thinking

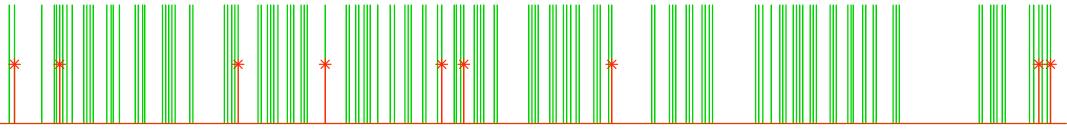

### A-G anticipates supreme court counter-arguments

- That Amber died of exhaustion on Sept 4 doesn't mean that she wouldn't otherwise later have died of digoxine poisoning
- That there were similar clusters of events at JKZ in earlier and later years doesn't mean that every one of the deaths in "Lucia's cluster" are natural

#### Old data

#### Latest data

, , JKZ			, , JKZ		
Inc	ident N	ormal	Ind	cident	Normal
Lucia	9	133	Lucia	7	135
Others	0	887	Others	4	883
, , RKZ41 , , RKZ41					
Inc	ident N	ormal	Ind	cident	Normal
Lucia	1	0	Lucia	1	2
Others	4	361	Others	4	359
, , RKZ42		, , RKZ42			
Inc	ident N	ormal	In	cident	Normal
Lucia	6	52	Lucia	5	53
Others	9	272	Others	10	271

- Three children represent 7=2+2+3 of the now 11 incidents (one illegal euthanasia removed)
- Two incidents actually occurred in the shift after Lucia's
- At least two incidents outside of Lucia's shifts are missing (they weren't *suspicious* incidents)

#### The present p-values

- Cochran-Mantel-Haenszel test
   JKZ; RKZ-41, -42; & Elffers' post-hoc correction
   1 in 916
- <u>Ultimate stratification</u>
   11 days at JKZ with both incident & Lucia on duty
   1 in 25
- Gamma(1) heterogeneity over Poisson intensity
   JKZ, RKZ pooled
   1 in 25

#### & what about ...?

- *Post-hoc* problem
- Data selection problem
- Information from outside Lucia period; total number(s) of incidents.

[Elffers analyses distribution of incidents *between* nurses, *within* period]

## Statistics in Court: 3 Approaches

- Significance testing
- Grand Bayesian synthesis
- Likelihood Ratio

#### Likelihood Ratio

- What is hypothesis of defence,  $H_0$ ?
- What is hypothesis of prosecution,  $H_A$ ?
  - Elffer's  $H_0$ : conditional on shifts, incidents are uniformly random
  - Defence: you can't use statistics  $H_0$ : the incidents would have happened anyway
  - Prosecution: the incidents happened because Lucia proved them, so they were certain
     *H*<sub>A</sub>: the incidents were happened because Lucia was there

## Basic empirical research for $H_0$ still missing

(let alone  $H_A$ )

- Events are strongly clustered
- Shifts fall in regular patterns
- Variation between nurses [a nurses' actions can *define* when/what is an incident]
- Differently qualified nurses do get different shifts
- A hospital ward is in a non-constant environment [winter/summer, changing admissions/discharge policy, opening/closing other wards]
- Multiple incidents concerning same patient

- Hidden confounders cause heterogeneity between nurses, between days
- var(X) = E(var(X|Y)) + var(E(X|Y))
- *Independent uniform* random rare events (<u>Elffers</u>): variance ≈ mean
- Unmeasured heterogeneity:
   variance >> mean

### The basic empirical research for $H_0$ is still missing ...

and as long as it remains so, statistics does not help the prosecution (though it might help the defence!)

## Likelihood Ratio problems

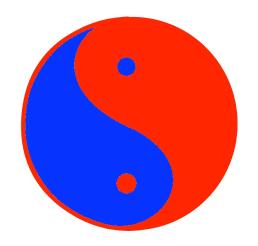

- parties must agree on "sampling frame"
- who owns the hypotheses?
- posthoc hypotheses <u>not</u> allowed
- nuisance parameters
- ...
- The defence isn't obliged to play the game (the *prosecution* must convince the *court* that, beyond reasonable doubt, ...)

#### Lucia Lessons

- Many reforms are being made
- "Science" and "Justice" are talking together; the media are critical
- Still: gut reaction of "system" is: create rules, checklists, registers
- We want honest cops, upright magistrates, intelligent and knowledgable lawyers, wise judges who weigh all the evidence and use their common sense and intellect and humanity
- We want the system to admit mistakes so that it can learn from them

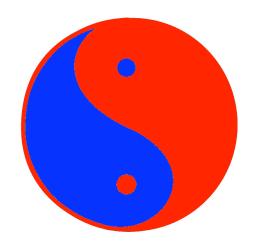

"Science" vs. "Justice":

was this a typical case of two cultures?

- No!
  - scientific community creative thinking
  - legal community bureaucratic thinking

# "Science" vs. "Justice": was this a typical case of two cultures?

- No!
  - scientific community chaos, change
  - legal community harmony, certainty

For an establishment like a national legal system,

# Learning represents the possibility of **failure** and must thus be avoided if possible
